We started out at Bloomberg Hall. We waited about five to ten minutes for Jeff to set for the correct time zone and allow the GPS to establish its position. It confirmed the WGS 84 datum setting. Jeff navigated to the waypoint page and entered in the coordinates of the metal pole (40.35281, -74.64603). We followed the arrow on the compass across to Washington Avenue, over towards the football stadium. We continued walking, passing through some neighborhoods. We came to a park and saw the pole in the middle of the path. We wandered around the park a little bit because the GPS reported that we were still 30 feet and then 49 feet away from the pole, but the satellite page listed the GPS error at 60 feet. We never found another pole within the area so we concluded that this was the correct waypoint.
